Dear Mr. Lacyk,

Haven't had any direct contact or additional information transference since we utilized proper format/updated and sent in to you all of our corrected claims relating to patent application number 10/627,286 [Electromagnetic Brain Animation] generator - which I believe was approximately five [5] months ago.

As you know, this particular extremely complex 'Utility' patent mechanism was first presented for patent investigation and approval in July of 2003. We, of course, are aware that the total process for this type of instrumentation can be quite lengthy.

We request by "phone or fax or email" - if you would be kind enough to bring us up to date as to the very latest actions or lack thereof. Our "EBA" generator will, I'm absolutely sure, come on to the medical market in one similar form or another - and we, of course, being biased and having a vested interest - believe the positive impact will be significant. Consequently, we are fairly well always in a state of eagerness and anxiety as to how the process is proceeding as well as how much further to we have to go.

Thank you very much for your assistance and your understanding.
